

PRASHANT KUMAR

Game Programmer

prashant.kumar.34800@gmail.com | +91 7815990618 | [LinkedIn](#) | [Portfolio](#)

Hyderabad, Telangana, India | Open to Relocation

PROFESSIONAL SUMMARY

Tech enthusiast passionate about gaming and interactive technologies, specializing in modular, optimized game development. Proficient in Unreal Engine 5 with expertise in creating immersive gaming experiences through advanced gameplay mechanics, AI systems, and 3D asset integration. Skilled in C++, Blueprints, and Blender for developing visually compelling and performance optimized digital experiences.

TECHNICAL SKILLS

Game Engines: Unreal Engine 5, Unity (Basic)

Programming: Blueprint Visual Scripting, Python, C++ (Basic)

3D Modeling: Blender, 3D Asset Creation, Environment and Level Design

Tools: Git, Adobe Photoshop, Adobe Premiere Pro

Core Skills: Gameplay Systems, Physics and Movement, AI Behavior, Level Design, UI Integration, Debugging and Optimization, Modular Architecture

Specializations: Horror Games, FPS Mechanics, 2D Platformers, Cinematic Effects

Languages: English (Fluent), Hindi (Fluent), Telugu (Native)

GAME DEVELOPMENT PROJECTS

Sudden — First-Person Horror Game — Unreal Engine 5

- Designed and developed a complete first-person horror experience with modular level architecture
- Implemented AI driven enemy behaviors with advanced pathfinding and player detection systems
- Created immersive atmosphere using dynamic lighting, post-processing effects, and cinematic sequences
- Integrated custom 3D assets created in Blender, optimizing performance for real-time rendering

HostageX — First-Person Shooter — Unreal Engine 5

- Developed fast-paced FPS gameplay with hostage rescue mechanics and environmental exploration
- Engineered AI enemies with dynamic combat behaviors and tactical positioning in terrorist occupied environments
- Implemented randomized key spawning system ensuring high replayability and varied player experiences
- Designed modular Blueprint systems for weapon mechanics, player progression, and objective tracking

Mini Hero — 2D Action Platformer — Unreal Engine 5

- Created pixel art action platformer with level based progression and responsive combat mechanics
- Developed enemy AI with varied attack patterns and movement behaviors using Blueprint scripting
- Optimized game performance achieving smooth 60 FPS through efficient Blueprint logic and asset management
- Designed intuitive player controls with tight movement mechanics and satisfying combat feedback

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science

Specialization: Artificial Intelligence and Machine Learning

Currently Pursuing | Expected Graduation: 2027

ACHIEVEMENTS AND ADDITIONAL INFORMATION

- Developed portfolio featuring 3+ complete game projects across multiple genres (horror, FPS, platformer)
- Demonstrated expertise in creating modular, reusable game systems for rapid prototyping and iteration
- Strong foundation in AI and ML principles applicable to advanced game AI and procedural content generation
- Proficient in Git version control for collaborative development and code management
- Experience with complete game development pipeline from concept to polished playable build
- Self-taught Unreal Engine 5 developer with continuous learning through projects and experimentation
